

# PDF Bookmarks

A clean demonstration document for ONLYOFFICE marketplace screenshots

**Use this document to show named page markers, one-click navigation, and persistence without exposing personal files.**

Offline - per PDF - original file unchanged

# Quick start

Open the PDF Bookmarks panel from the Plugins ribbon. Navigate to a page, enter a useful name, and save it. Your bookmark immediately appears in page order.

# Project overview

Long reports, research papers, textbooks, and manuals are easier to revisit when important pages have memorable names. This page is a good first screenshot bookmark.

| <b>Storage</b>            | Local to this editor environment |
| <b>PDF modified</b>       | No                               |

**Bookmark this page, navigate elsewhere, then return with one click.**

# Navigation workflow

Select any saved bookmark to return to its page. The plugin uses the current ONLYOFFICE PDF navigation API and keeps the reading flow inside the editor.

| <b>Suggested bookmark</b> | Navigation workflow              |
| <b>Demo page</b>          | 4                                |
| <b>Storage</b>            | Local to this editor environment |
| <b>PDF modified</b>       | No                               |

**Bookmark this page, navigate elsewhere, then return with one click.**

# Private local storage

Bookmark data stays in the editor's local storage. No account, API key, analytics endpoint, or network service is required.

|                           |                                  |

| <b>Suggested bookmark</b> | Private local storage            |
| <b>Demo page</b>          | 5                                |
| <b>Storage</b>            | Local to this editor environment |
| <b>PDF modified</b>       | No                               |

**Bookmark this page, navigate elsewhere, then return with one click.**

# Separate PDF identities

Each document receives its own bookmark list. A compact first-page fingerprint helps distinguish same-named local PDFs without storing the page image.

# Implementation details

The plugin is built with HTML, CSS, and JavaScript. It follows ONLYOFFICE light, dark, and contrast-dark themes and provides scale-aware icons.

|                           |                                  |
|---------------------------|----------------------------------|
| <b>Suggested bookmark</b> | Implementation details           |
| <b>Demo page</b>          | 7                                |
| <b>Storage</b>            | Local to this editor environment |
| <b>PDF modified</b>       | No                               |

**Bookmark this page, navigate elsewhere, then return with one click.**

# Accessibility

Text colors are contrast tested, controls have clear labels, and status changes use accessible live regions. Keyboard focus remains visible throughout the panel.

|---------------------------|----------------------------------|
| <b>Suggested bookmark</b> | Accessibility                    |
| <b>Demo page</b>          | 8                                |
| <b>Storage</b>            | Local to this editor environment |
| <b>PDF modified</b>       | No                               |

**Bookmark this page, navigate elsewhere, then return with one click.**

# Offline reliability

Bookmarks are written immediately and flushed again during editor lifecycle events. Reopening the same PDF restores the saved page markers.

|                           |                                  |

| <b>Suggested bookmark</b> | Offline reliability              |
| <b>Demo page</b>          | 9                                |
| <b>Storage</b>            | Local to this editor environment |
| <b>PDF modified</b>       | No                               |

**Bookmark this page, navigate elsewhere, then return with one click.**

# Release quality

Automated tests cover document identity, persistence, ordering, rename and delete operations, package metadata, icons, and theme contrast.

|                           |                                  |

## Next steps

Potential future improvements include nested bookmarks, manual ordering, color labels, and portable import or export. User feedback should determine the order.
